

Remove the blade quickly and easily and keep hands and fingers **well** away from harm in the process.

Please contact us if you'd like to trial them

The device is designed to promote best practice when removing and handling used surgical blades and protect the user and those in close proximity from accidental injury and infections of blood borne disease transmission such as hepatitis and HIV/AIDS.

Developed in consultation with many Theatre nurses to meet their requirements.

It feels safe, it is safe

Suitable for multiple use to safely remove a wide range of commonly used blades and suitable for Right or Left hand use.

Easy to hold, intuitive to use, comfortable and stable in operation.

The blade removal process engages both hands and by design keeps fingers and hands well away from harms way.

Hold the blade safely and securely until it is safely offloaded into a needle counter where the used blades can be accounted for during surgeries.

The grip and removal motion is intuitive to promote compliance even at every stage of the operation.

Available in sterile pouches or in bulk for inclusion into your procedure packs.

Code: SBR1 (Sterilised in pouches)
Code: SBR2 (Unsterilised in bulk)

Scalpel Blade Remover

Patent Pending

Save your staff the stress & anxiety related to injuries and infection; and save your hospital the significant direct and indirect costs resulting from such injuries.
